

SOIL CONSERVATION DISTRICT – 26

MISSION

The mission of the Prince George's Soil Conservation District is to protect and promote the health, safety and general welfare of the citizens of the State and County, and otherwise enhance their living environment, by conserving soil, water, and related resources and by controlling and preventing soil erosion in order to preserve natural resources, control floods, prevent impairment of dams and reservoirs, assist in maintaining the navigability of rivers and harbors, preserve wildlife, protect the tax base and protect the public lands.

ORGANIZATION CHART

DESCRIPTION OF SERVICES

The Prince George's County Soil Conservation District is a political subdivision of the State and is governed by a five-member Board of Supervisors who direct and oversee the local District. The District:

- Reviews and approves grading and sediment control plans for all construction projects that disturb in excess of 5,000 square feet of land area, as required by State law.
- Works with State and Federal agencies on agricultural issues, including erosion control and land strategies that help improve water quality in the Chesapeake Bay and its tributaries.
- Develops education and outreach programs that help protect land, water and related natural resources and discourage land use abuses.
- Approves ponds for dam safety in lieu of a State permit.

FY2002 HIGHLIGHTS

- The sediment control plan review and approval program and the agricultural water quality program remained the District's primary functions. In accordance with the County's strategic goals, the District reviewed implementation of internet access which includes document imaging, financial transactions and technical plan approvals. They are awaiting implementation in other agencies to gauge its applicability to District functions.
- The District generates fees from developers for the District's review and approval of sediment control plans. Most of the fees collected are credited to the Stormwater Management Enterprise Fund and partially support

the District's activities. The FY2002 fees to be paid to the County are estimated at \$186,300. The District will also pass on an additional \$35,000 from the Maryland Department of Agriculture.

- The District continued to promote environmental awareness through programs such as the "Envirothon," which encourages local high school students' involvement in environmental science through competition and training, and information booths at local events such as the Prince George's County Fair.

FY2003 OVERVIEW

- The General Fund costs of the Soil Conservation District will continue to be recovered from the Stormwater Management Enterprise Fund. Costs increase in FY2003 to support normal salary increases for personnel including cost-of-living adjustments and merit increments.
- Permit fees and other income generated by the District, projected at \$186,300 for FY2003 are credited to the Stormwater Management Enterprise Fund.

In FY2000, County staff was increased to nine, fully restoring the District to its historical complement. This staffing level continues in FY2003. In addition to County funded positions, the District's operations also are supported by Federal and State funded positions.

PERFORMANCE MEASURES	FY1999 ACTUAL	FY2000 ACTUAL	FY2001 ACTUAL	FY2002 ESTIMATED	FY2003 PROJECTED
Urban Program					
Average number of work days required to review a sediment control plan	8.1	4.6	3.3	4.0	4.0
	The maximum allowable review time is 10 working days.				
County Soil Survey					
Number of field acres updated	-	-	148,000	145,000	26,500
	Technical soils data is regularly used by government agencies, developers and agricultural entities. The County has entered into an agreement with the District and USDA Natural Resource Conservation Service to modernize this technical resource. In FY2003, it is projected that the remaining 26,500 acres of the County will be surveyed.				
Rural Program					
Number of new acres covered by completed soil and water quality plans	1,900	6,414	3,500	3,300	3,700
	The number of acres covered increased substantially in FY2000 due to an increase in the District's State farming requirements.				
Best Management Practices Installed	105	122	160	156	150
	Best management practices are agricultural land strategies which help improve water quality in the Chesapeake Bay and its tributaries.
